Compact Packaged Solution

When most of us hear the words custom air handler, one of the first things that comes to mind is how large is the unit going to be. However this month our featured unit demonstrates XeteX's capabilities around compact unit design and construction.

This unit was designed for a mobile lab application requiring precision temperature and humidity control, as well as extremely tight dimensions and weights. The unit features the following:

- Modular aluminum framing construction
- 1" foam injected panels
- Custom color panels
- DX Refrigeration using a digital scroll compressor
- Electric heat
- Hot gas reheat coil
- Steam humidifier
- EC motors for the supply fan and condenser fan
- XeteX's factory controls using a CAREL controller

This unit is a great example of how XeteX has risen to the challenge of incorporating all the major components of a package air handler into a compact custom design. The unit showcases XeteX's capability to meet a variety of customer requirements whether big or small to demonstrate our engineering and manufacturing team's experience in the custom air handling market to design, build, control and deliver the highest quality units regardless of how unique or complex the application.

If you need any assistance on an application you are currently working on please contact XeteX Sales at 612-724-3101 or email us at sales@xetexinc.com.

Unit Specification:

Model:	XAH-650-CD-HG-HE-HM-AC-SP		
Height:	72"	Width:	31"
Length:	60"	Weight:	900 lbs.
OA Summer Design:	113°F / 87°F	OA Winter Design:	50°F / 50°F
Supply CFM:	635	Energy Recovery:	N/A
Cool Type:	DX w/ HGRH	Heat Type:	Electric Heat
Leaving Cooling Temp:	53°Fdb / 53°Fwb	Leaving Heating Temp:	75°Fdb
